Sample in Flowing Vapor Cryostats

VNF-100 optical and VNF-100T non-optical 77 K cryostats

Ideal for cooling samples with poor thermal conductivity, VNF-100 cryostats provide uniform cooling for liquids, powders, and irregularly shaped samples. Samples are located in a stream of nitrogen vapor, eliminating the need for careful thermal anchoring. The VNF-100 is ideal for both optical and electrical measurements from 65 K to 325 K.

VNF-100 optical and VNF-100T non-optical 77 K cryostats

The Lake Shore VNF-100 Series are liquid nitrogen cooled, variable temperature cryostats with the sample located in flowing vapor. Ideal for experiments with samples that are difficult to thermally anchor such as liquid or powder samples, these cryostats are a low-cost alternative to liquid helium or cryocooler based systems when temperatures below 65 K are not required. The VNF-100 Series features a top-loading sample chamber for rapid sample exchange, and four-way, f = 1.0 optical access to the sample chamber.

The sample is easily accessed by removing the top-loading sample positioner. Samples can be connected with cryogenic-service wiring (single conductor, twisted-pair, or coaxial cables) for electrical measurements, while the four-way optical sample chamber enables both reflectance or transmission geometries. Standard fused silica windows provide transmission from the UV to near-IR regions. Alternatively, optional window materials can be installed for IR measurements.

The VNF-100T provides similar performance, but in a compact non-optical configuration. The small diameter non-optical tail of the VF-100T can be inserted into an electromagnet for use in magnetoelectric applications.

Typical applications for the VNF-100 Series include spectroscopy (photoluminescence, FTIR, UV- visible—VNF-100 only) and electrical materials characterization.

Key features

Top-loading sample	e-in-flowing-vapor configuration
Internal LN ₂ reserv	oir with integrated cryopump enables all-day unattended operation
silicon diode as it e	loop temperature control, ${\rm LN_2}$ is vaporized and temperature controlled with a calibrated enters the sample chamber; a second heater and sensor on the sample mount is used for sweeps and precise sample temperature control
Sample is accessed	d by opening a single clamp and removing the top-loading sample positioner
Continuous temper	ature range from 65 K to 300 K (500 K optional with VNF-100T)
O-ring sealed ports	accept DC and RF electrical feedthroughs
Optional DC and RF	wires and cables for electrical measurements
Four optical window	w ports ($f = 1.0$) can be used for optical measurements from UV to IR

VNF-100 Series

Featured components

Sample in flowing vapor for uniform sample cooling

Integrated control heater and calibrated silicon diode control sensor

Dual-loop heater configuration for rapid and precise sample temperature control (simultaneous control at liquid vaporizer and sample mount)

Integrated $\ensuremath{\mathsf{LN}}_2$ reservoir provides 6 to 8 h of operation between refills

Adjustable cooling power using integrated needle valve

Removable sample positioner including copper sample mount, removable optical sample holder, housekeeping feedthrough, 10-pin feedthrough for experimental wiring, and two spare o-ring sealed sample access ports

Optical vacuum shroud with four o-ring sealed window ports (VNF-100 only)

Easily add DC, AC, and mixed DC+AC measurement capabilities to your cryostat with an M81-SSM

This modular, multichannel system provides highly synchronized DC, 100 kHz AC, and mixed DC + AC sourcing and measuring — including both voltage and current lock-in measurement capabilities — for low-temperature material research performed in your cryostat. It supports up to three remote-mountable source and three measure modules per a single M81-SSM-6 instrument and, owing to its modularity, allows signal and source amplifiers to be located as close as possible to the sample being characterized. This minimizes the signal wiring to the sample, reduces noise, and increases measurement sensitivity. The modules also leverage patentpending MeasureSync™ real-time sampling technology to ensure synchronous sourcing and measuring across all channels. Plus, by having both DC and AC sourcing and measurement in one instrument, the M81-SSM can eliminate the need for mixed-instrument setups, greatly simplifying the setup of complex characterization configurations.

Real-time sampling architecture for synchronous sourcing/measuring

All source and measure channels are capable of DC and AC to 100 kHz signals

100% linear circuitry for the lowest possible source/measure noise

Optimized for fundamental, harmonic, and phase AC plus DC biased measurements

Unique, flexible instrument/distributed module architecture

Provides the absolute precision of DC plus the detection sensitivity performance of AC instrumentation

Uses a clean, simple UI and common programming API for fast setup

Included MeasureLINK software enables full end-to-end measurement and cryostat temperature control

For total control of measurements performed in a cryostat, add our MeasureLINK software

Our optional MeasureLINK software enables a wide range of capabilities including charting and logging, system monitoring with a cryostat-specific process view, and even controlling Lake Shore equipment as well as some third-party instrumentation, in a non-programming environment. You can also create unlimited functionality using the scripting development environment.

Create multiple configurations to support separate measurements

Monitor temperature and change setpoints with the monitor pane

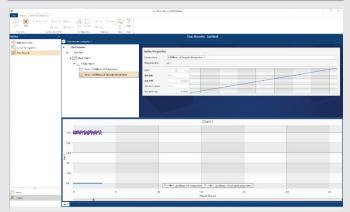

Easily create nested, multi-level measurement loop sequences

See real-time internal cryostat temperatures in Process View

Charts and log all system variables with Chart Recorder

No programming required — drag and drop to create temperature sweeps, access measurements, and add third-party instruments

Custom scripting function allows you to construct new and edit existing measurement scripts

The chart recorder utility enables charting and logging of all system variables, for example, so you can keep a close eye on temperature trends in a cryostat experiment in real-time; it also helps you determine when steady-state conditions have been reached.

Accessories

M81-SSM electronic synchronous source measure system

Contact us for standard/optical sample mounts or for interface cables/adapters for M81-SSM system/cryostat integration.

Also available: specially priced preconfigured M81-SSM/cryostat packages for certain cryostat models—contact Sales for details.

M81-SSM-2 M81-SSM instrument with 1 source and 1 measure

channel, including M81-SSM accessory kit (USB-A to USB-C adapter, USB-A male to USB-B male cable, terminal connectors for digital I/O, terminal connectors for chassis ground, quick-start guide) and

a 2 m (6.6 ft) LEMO to BNC adapter cable

M81-SSM-4 M81-SSM instrument with 2 source and 2 measure

channels, including M81-SSM accessory kit (USB-A to USB-C adapter, USB-A male to USB-B male cable, terminal connectors for digital I/O, terminal connectors for chassis ground, quick-start quide) and

a 2 m (6.6 ft) LEMO to BNC adapter cable

M81-SSM-6 M81-SSM instrument with 3 source and 3 measure

channels, including M81-SSM accessory kit (USB-A to USB-C adapter, USB-A male to USB-B male cable, terminal connectors for digital I/O, terminal connectors for chassis ground, quick-start guide) and

a 2 m (6.6 ft) LEMO to BNC adapter cable

ML-MCS MeasureLINK-MCS software with scripting

development license. Includes complete

MeasureLINK installation with Lake Shore instrument drivers, chart recorder functionality and drag-and-drop measurement sequences. Some application

packs sold separately.

Other accessories

LN-50 50 L LN₂ storage Dewar
10RVP Vacuum pumping station
10DDP Vacuum pumping station
TS-85-D Turbomolecular pumping station
