

Quantum Diamond Microscope

State of the art, wide-field imaging of magnetic fields, with applications spanning geoscience, bio-imaging, electronics, materials characterization, and quantum research

Highlights

Image millitesla to nanotesla magnetic fields

Tunable spatial resolution down to less than one micron and field-of-view up to (4×4) mm².

Correlate magnetic and optical images

Collect magnetic and optical images of samples using the same optical system for straightforward co-registration.

Vector measurements

The NV-diamond sensor enables reconstruction of the magnitude and direction of magnetic fields, providing superior reconstruction of magnetic source distributions.

Quantum-grade diamond

Manufactured by QDM.IO partner Element Six, with properties optimized for microscale magnetic field mapping applications.

Robust and easy to use

Operates under ambient room conditions, with no cryogenics, vacuum systems, or special power requirements.

Imaging of a geological sample using a quantum diamond microscope.
Reproduced from GGG, Vol. 18, Iss. 8, 3254-3267 (2017). DOI: 10.1002/2017GC006946

Operated using Ferrum

Easily configure measurements with Ferrum

Fully integrated software with an intuitive graphical user interface, including live visualization of data during acquisition.

Built from the ground up for wide-field magnetic imaging

Continuously updated with new features and supported by expert QDM.IO technical staff.

GPU-accelerated data analysis

Go from raw hyperspectral imaging data to magnetic field maps in seconds using a suite of GPU-based data analysis tools.

Quantum Diamond Microscope

Specifications

Microscope

PERFORMANCE (TYPICAL)

| Metric | Value |
|----------------------------|---|
| Magnetic Sensitivity | < 5 $\mu\text{T}/\text{Hz}^{1/2}$ (at 1 μm spatial resolution) , < 200 nT/Hz ^{1/2} (at 10 μm spatial resolution) |
| Minimum Spatial Resolution | $\leq 1 \mu\text{m}$ |
| Field of View (FoV) | Up to (4 x 4) mm ² per FoV (larger samples can be imaged with tiling, motorized stages) |
| Operating Frequency | DC - 100 Hz |
| Dynamic Range | At least 0.2 mT |

GENERAL

| | |
|------------------------|---|
| Dimensions (W x L x H) | 330 mm x 493 mm x 564 mm |
| Cooling | Air-cooled |
| Vibration | Op. Theatre (ISO) or better |
| Weight | 25 kg (approx.) |
| Environment | 10 °C - 35 °C, <90% R.H. (non-condensing) |

Controller

GENERAL

| | |
|------------------------------|--|
| Cable Length (to microscope) | 3 m (custom lengths available) |
| Operating Voltage | 100-240 VAC, 50/60 Hz |
| Power Consumption | 800 W max, 400 W typical |
| Cooling | Air-cooled |
| Weight | 10 kg (approx.) |
| Environment | 10 °C to 35 °C, <90% R.H. (non-condensing) |
| Dimensions (W x L x H) | 450 mm x 450 mm x 180 mm (rack-mountable) |

Publications

Examples of academic work using QDM technology.

GEOSCIENCE

Paleomagnetic evidence for a long-lived, potentially reversing martian dynamo at ~3.9 Ga

SC Steele, RR Fu, MWR Volk, TL North, AR Brenner, AR Muxworthy, GS Collins, and TM Davison
Science Advances 9, eade9071 (2023).
 DOI: <https://doi.org/10.1126/sciadv.ade9071>

Plate motion and a dipolar geomagnetic field at 3.25 Ga

AR Brenner, RR Fu, ARC Kylander-Clark, GJ Hudak, and BJ Foley
PNAS 119 (42), e2210258119 (2022).
 DOI: <https://doi.org/10.1073/pnas.2210258119>

Micrometer-scale magnetic imaging of geological samples using a quantum diamond microscope

DR Glenn, RR Fu, P Kehayias, D Le Sage, EA Lima, and BP Weiss
Geochemistry, Geophysics, Geosystems 18 (8), 3254-3267 (2017).
 DOI: <https://doi.org/10.1002/2017GC006946>

Solar nebula magnetic fields recorded in the Semarkona meteorite

RR Fu, BP Weiss, EA Lima, R. J Harrison, X-N Bai, SJ Desch, DS Ebel, C Suavet, H Wang, DR Glenn, D Le Sage, T Kasama, RL Walsworth, and AT Kuan
Science 346, 1089-1092 (2014).
 DOI: <https://doi.org/10.1126/science.1258022>

LIFE SCIENCES

Single-cell magnetic imaging using a quantum diamond microscope

DR Glenn, K Lee, H Park, R Weissleder, A Yacoby, MD Lukin, H Lee, RL Walsworth, and CB Connolly
Nature Methods 12, 736–738 (2015).
 DOI: <https://doi.org/10.1038/nmeth.3449>

Optical magnetic imaging of living cells

D Le Sage, K Arai, DR Glenn, SJ DeVience, LM Pham, L. Rahn-Lee, M. D. Lukin, A. Yacoby, A Komeili, and RL Walsworth
Nature 496, 486–489 (2013).
 DOI: <https://doi.org/10.1038/nature12072>

Mapping the microscale origins of magnetic resonance image contrast with subcellular diamond magnetometry

HC Davis, P Ramesh, A Bhatnagar, A Lee-Gosselin, JF Barry, DR Glenn, RL Walsworth, and MG Shapiro
Nature Communications, 9(1): 131 (2018).
 DOI: <https://doi.org/10.1038/s41467-017-02471-7>

CONDENSED MATTER, MATERIALS SCIENCE, AND ELECTRONICS

Imaging Viscous Flow of the Dirac Fluid in Graphene Using a Quantum Spin Magnetometer

MJH Ku, TX Zhou, Q Li, YJ Shin, JK Shi, C Burch, H Zhang, F Casola, T Taniguchi, K Watanabe, P Kim, A Yacoby, and RL Walsworth
Nature 583, 537–541 (2020).
 DOI: <https://doi.org/10.1038/s41586-020-2507-2>

Magnetic Field Fingerprinting of Integrated-Circuit Activity with a Quantum Diamond Microscope

MJ Turner, N Langellier, R Bainbridge, D Walters, S Meesala, TM Babinec, P Kehayias, A Yacoby, E Hu, M Lončar, RL Walsworth, and EV Levine
Physical Review Applied 14, 014097 (2020).
 DOI: <https://doi.org/10.1103/PhysRevApplied.14.014097>

QUANTUM RESEARCH

High-Precision Mapping of Diamond Crystal Strain Using Quantum Interferometry

MC Marshall, R Ebadi, C Hart, MJ Turner, MJH Ku, DF Phillips, and RL Walsworth
Phys. Rev. Applied 17, 024041 (2022)
 DOI: <https://doi.org/10.1103/PhysRevApplied.17.024041>

Characterisation of CVD diamond with high concentrations of nitrogen for magnetic-field sensing applications

AM Edmonds, CA Hart, MJ Turner, PO Colard, JM Schloss, KS Olsson, R Trubko, ML Markham, A Rathmill, B Horne-Smith
Mater. Quantum. Technol. 1 025001 (2021)
 DOI: <https://doi.org/10.1088/2633-4356/abd88a>
